

End Equipment Ownership Matrix

Case	Description/Requirements	Ownership	Recommendation
VELCO Substation –Core Network	End electronics located at a VELCO substation- equipment supports current and potential future functionality	VELCO Ownership with costs socialized VELCO responsible for the operation and maintenance of the equipment	No recommendation needed owners aligned with this application
DU Substation-Core Network	End electronics located at a DU substation- equipment supports current and potential future functionality	VELCO Ownership with costs socialized VELCO responsible for the operation and the DU is responsible for the maintenance of the equipment	Recommend VELCO ownership in this case since function supports operation of the core network, further recommend socialized costs of the equipment
DU Substation	End electronics located at a DU substation- equipment supports current functionality with the costs for future functionality born by party wishing access to the network	Ownership DU specific since VELCO interested in the data only (similar to BED approach) DU responsible for the operation and maintenance of the equipment	Recommend DU specific cost allocation since equipment located in DU substation and the transport is on the dispersed network.
